**Subject:** waste water treatment

r.e. Cabot Boyertown facility Docket No. 40-6940

Your letter dated August 1, 2002, requested NRC concurrence that the proposed treatment changes are within the limits of your source material license SMB-920. Based on the information provided with the letter, it appears that the limits of the license will be met and the NRC staff has no objection to the change. Also, the July 8, 2002, letter from the Pennsylvania Dept of Environmental Protection indicated that the raffinate waste stream is treated under an existing NPDES permit and the proposed change has been reviewed.

This change in treatment should be part of the license application revisions provided during the on going license renewal process.
